Anh Thomas Performance
August 2026

ANH THOMAS
PART OF THE MONTET GROUP

We measure only the performance of the money that was invested. We factor in any cash received in the form of dividends from stocks purchased and any realized cash that was held resultant of the sale of a stock. We do not however factor in sums received for investment that did not enter the investment cycle. Please remember that past performance is no guarantee of future results.

Portfolio Performance

The benchmark VN-Index and broader Vietnamese equities plunged to multi-month lows during a severe July sell-off, creating a deep market deficit that a robust August rebound could not completely erase. Despite a powerful wave of late-summer bargain hunting that lifted the blue-chip VN30-Index, major indexes still concluded the two-month period lower than their June starting points. In August 2026, Hanoi index is up by 5.1% and Ho Chi Minh index is up by 5.6%. Our reference portfolio is up by 5.4%. Anh Thomas returns over the long run are quite impressive. Since being launched, Anh Thomas portfolio overall return is 896.2%, greatly outperforming both Hanoi and Ho Chi Minh indexes (312.7% and 360.3% respectively). Our strategy of targeted stock selection and local expertise continues to deliver outstanding results.

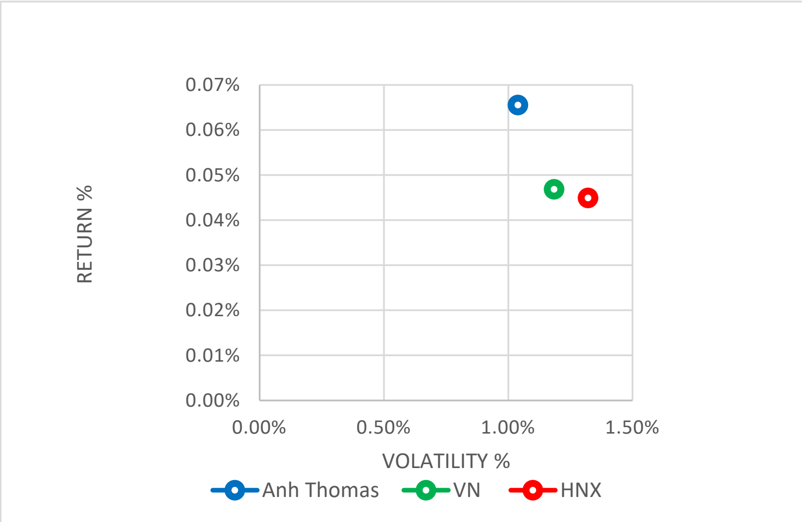
Daily return vs Daily volatility

Anh Thomas portfolio has not only managed to perform far better than the main Vietnamese indexes but it has also managed to do so with a reasonably low volatility.



Current Diversification

Diversification is a key element of our long-term investment strategy. A diversified portfolio is expected to deliver the same expected return with lower expected risk compared to an undiversified or partially diversified portfolio.
